

## Can you find 5 birds that use our maple sugarbush?

Look for birds we find in our sugarbush during the breeding season. They will be found in the forest near the stars highlighted on this map. Each bird has a letter with it. Make a note of each letter. After you've found all 5 birds, unscramble the letters to spell a word in the spaces provided.

1

## **Black-throated Green Warbler**

A sugarbush that hosts a diversity of native tree species, including evergreens such as hemlock, attracts birds like the Black-throated Green Warbler.

4

## **Yellow-bellied Sapsucker**

Standing dead trees (snags) are left for cavity nesting birds like the Yellow-bellied Sap Sucker. Snags are also used by other woodpeckers to excavate for insects.

2

## **Black-throated Blue Warbler**

We promote the growth of young trees and shrubs to provide cover and safe nesting places for birds like the Black-throated Blue Warbler.

5

## **Scarlet Tanager**

Large trees, >24" in diameter and taller than 30' are important for a healthy forest canopy. The Scarlet Tanager forages and nests high in the forest

3

## **Ovenbird**

Downed trees and other woody material are left on the forest floor. Birds like the Ovenbird rely on brush piles and downed trees for foraging for insects and
